

HOW OUR PROCESS WORKS

8-STEP DUCT CLEANING PROCESS

Discover how our 8-step process ensures a thorough cleaning, leaving your ducts dust-free and your air healthier.

1

VACUUM TRUCK SETUP

We run our vacuum hose and compressed air line. The 8" vacuum line is run into the basement furnace room & air line is run to upstairs. All vents are covered to ensure suction & no air borne dust will system is being cleaned.

2

HOSE CONNECTIONS

Our 8" vacuum hose is connected to the main supply duct. This creates suction on the complete supply side ducts.

3

SUPPLY VENT CLEANED

When technicians have sealed all vents the 250 psi air whips clean each individual vent starting from highest point in home to basement vents.

4

MAIN SUPPLY LINE

Using predator air whips & scorpion balls the main supply line is cleaned using 250 psi air pressure to suction hose.

5

COLD AIR RETURN SIDE

Our 8" suction hose is then connected to the return air trunk line. We then go back upstairs & clean all return vents working our way back downstairs.

6

MAIN RETURN LINE

We then clean main trunk line using our predator whips pushing all dirt & debris to suction at end of trunk line.

7

FURNACE BLOWER FAN

After duct work is thoroughly cleaned & double checked with the before & after photos the technician then proceeds with cleaning the air handlers furnace fan & compartment.

8

SANITIZATION

Colair Team proudly uses only Benefect Disinfectant, Benefect is the only all botanical disinfectant on the market today. It is an all natural product 100% safe and effective to clean & sanitize air ducts.
